### **SPECIAL OFFER FOR OWNERS OF OLDER ZETOR MODELS**

Many of our tractors have been in use for more than 20 years. These use injection pump attached to the engine with three bolts (not four bolts like the current pumps).

We recently installed new equipment so we can now offer **pump checkup**, complete gasket sets replacement and pump bench test **for just \$395**. This will prevent any potential of fuel getting in oil and make your pump ready for the next 20 years of service.

If you are interested, please unmount the pump and send to our address below. Pump can be removed after just removing 3 nuts on pump flange, no timing is necessary.

*Note: Tractors made after 1995 have the rear nut in 5-pointed shape. Use 18 mm, six-pointed socket to remove this special nut.*

Call (717) 576-4116 with any questions.
